SKILLS

Languages C#, Python, TypeScript, JavaScript, SQL, Dart, Java, C, C++, Rust, GDScript, HTML, CSS
Frameworks Next.js, React, Spring Boot, Node.js, Docker, Kubernetes, REST, .NET, Flask, FastAPI, Flutter
Tools Git, MongoDB, PostgreSQL, Redis, AWS, Azure DevOps, Unity, Godot, NumPy, Firebase

WORK HISTORY

Software Developer

December 2023 - Present

AllThingsSports || AllThingsRugby || BinYousef

Doha, Qatar

- Designed and maintained the backend for [All Things Rugby](#) and [The Rugby App](#), serving 50k+ downloads with live scores, stats, highlights and news across .NET, SQL, Next.js, Flutter and Firebase.
- Built and optimized high-throughput REST APIs integrating multiple third-party data providers, achieving 900%+ performance gains through Redis and in-memory caching of player and match data, aggregation, and concurrency-safe refresh strategies.
- Deployed and configured *OpenClaw*, an open-source AI assistant, with custom workflows that monitor live matches through the weekend and alert the team when incoming provider data looks wrong, and generate the rugby brief from recent news every day.
- Architected an internal CRM/admin platform with role-based access (admins, authors), custom tournament management, and complete API data override for matches, fixtures, incidents, stats, media, and editorial content.
- Integrated a highly customized TipTap editor with smart embeds and built an AI-powered article/report generator with selectable GPT models that drafts content from live match data.
- Designed the Azure cloud architecture and built the Azure DevOps CI/CD pipelines, automating build, test and deployment across the API, worker, scheduler and scraper services.

Software Developer

September 2021 - August 2022

SmartICE

St. John's, NL

- Enhanced the performance and scalability of a Laravel and React.js dashboard by integrating Chart.js and optimizing REST API interactions for real-time data visualization.
- Contributed to the development and maintenance of three key applications: *SmartBUOY*, *SmartQAMUTIK*, and an internal data visualization dashboard.
- Automated data processing workflows, enabling seamless data retrieval, analysis, and visualization within the internal dashboard application.

EDUCATION

Memorial University of Newfoundland and Labrador

January 2019 – August 2023

Bachelor of Science in Computer Science

GPA: 3.46

Faculty of Science Dean's List 2022-23

PROJECTS

QueryPilot

OpenAI API, .NET, SQL, Docker

An AI agent turning plain-English questions into validated SQL via function calling, with a schema-aware planner and a guard layer that rejects destructive statements before they run.

TaskTracker

.NET Core, Entity Framework, SQL, Azure

Task management application built on clean architecture, containerized and deployed to Azure App Service.

Book Management System

Spring Boot, MongoDB, JUnit, AWS, Docker

Personal library manager with full CRUD and advanced document search, containerized and running on AWS.

CERTIFICATIONS

AWS Certified Solutions Architect – Associate

October 2023

[Issued by Amazon Web Services Training and Certification](#)
